

## 54AC541 Octal Buffer/Line Driver with TRI-STATE® Outputs

### General Description

The 'AC541 is an octal buffer/line driver designed to be employed as memory and address drivers, clock drivers and bus oriented transmitter/receivers. The 'AC541 is a noninverting option of the 'AC540.

This device is similar in function to the 'AC244 while providing flow-through architecture (inputs on opposite side from outputs). This pinout arrangement makes this device especially useful as an output port for microprocessors, allowing ease of layout and greater PC board density.

### Features

- $I_{CC}$  and  $I_{OZ}$  reduced by 50%
- TRI-STATE outputs
- Inputs and outputs opposite side of package, allowing easier interface to microprocessors
- Output source/sink 24 mA
- 'AC540 provides inverted outputs
- Standard Military Drawing (SMD)
  - 'AC541: 5962-88706

**Note 1:** Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT™ circuits outside databook specifications.
