

## OUTLINE

The RN5RYxx1 Series are CMOS-based VFM Control ICs for step-up DC/DC converter with an external driver transistor featuring high output voltage accuracy and low supply current. Each of the RN5RYxx1 Series ICs consists of a voltage reference unit, an error amplifier, an oscillator, a VFM control circuit and feed back resistors. A low ripple, high efficiency step-up DC/DC converter can be composed of the RN5RYxx1 Series with only an inductor, a diode, a capacitor, and a drive transistor.

Since the package for these ICs is SOT-23-5( Mini-mold)package, high density mounting of the ICs on boards is possible.

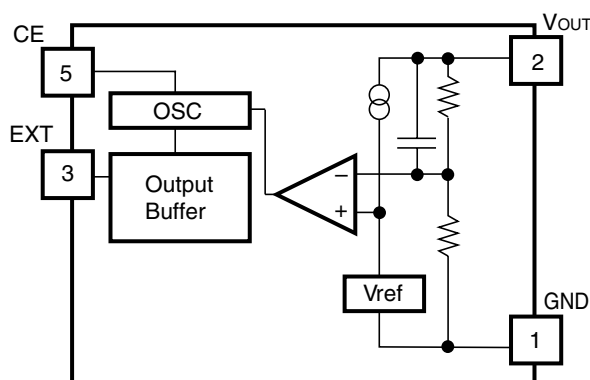

## FEATURES

- Low Supply Current .....Typ. 3 $\mu$ A
- Low Standby Current .....Typ. 0.6 $\mu$ A
- Low Temperature-Drift Coefficient of Output Voltage .....Typ.  $\pm 50$ ppm /  $^{\circ}$ C
- High Accuracy Output Voltage ..... $\pm 2.5\%$
- Low Oscillation Start-up Voltage .....Max. 0.8V
- Small Package .....SOT-23-5(Mini-Mold)

## APPLICATIONS

- Power source for battery-powered instruments.
- Power source for cameras, VCRs, camcorders, pagers, and other hand-held communication instruments.

## BLOCK DIAGRAM

## SELECTION GUIDE

In the RN5RYxx1 Series, the output voltage, the version and the taping type for the ICs can be selected at the user's request. The selection can be made by designating the part number as shown below :

RN5RY $\overbrace{\text{xxxx}}$  -  $\overbrace{\text{xx}}$  ← Part Number  
           ↑↑↑  ↑  
           a bc  d

Code	Contents
a	Designation of Output Voltage (V <sub>OUT</sub> ) V <sub>OUT</sub> can be designated within the range of 2.0 to 6.0V
b	1
c	Designation of Packing Type: A: Taping C: Antistatic bag for samples
d	Designation of Taping Type: Ex. SOT-23-5: TR, TL (refer to Taping Specification) "TR" is prescribed as a standard

For example, the product with Output Voltage 2.0V, Taping Type TR, is designated by Part Number RN5RY201A-TR.

## PIN CONFIGURATION

## PIN DESCRIPTION

Pin No.	Symbol	Description
1	GND	Ground Pin
2	VOUT	Output Pin
3	EXT	External Transistor Drive Pin (CMOS Output)
4	NC	No Connection
5	CE	Chip Enable Pin

## ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Ratings	Unit
$V_{IN}$	Input Voltage	+12	V
$V_{CE}$	CE Pin Input Voltage	-0.3 to $V_{OUT}+0.3$	V
$V_{EXT}$	EXT Pin Output Voltage	-0.3 to $V_{OUT}+0.3$	V
$I_{EXT}$	EXT Pin Output Current	$\pm 50$	mA
$P_D$	Power Dissipation	150	mW
$T_{opt}$	Operating Temperature	-30 to +85	°C
$T_{stg}$	Storage temperature	-55 to +125	°C
$T_{solder}$	Lead Temperature (Soldering)	260°C, 10s	

### ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded even for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

## TYPICAL APPLICATIONS

Components : Inductor (L1)	: CD105
Diode (D1)	: D1FS4A (Schottky Type)
Capacitor (C1)	: 33 $\mu$ F (Tantalum Type)
Capacitor (C2)	: 47 $\mu$ F (Tantalum Type)
Capacitor (C3)	: 47 $\mu$ F (Tantalum Type)
Transistor (Q1)	: 2SD1628G
Base Resistor (Rb)	: 220 $\Omega$
Base Capacitor (Cb)	: 2200pF

### APPLICATION HINTS

- A spike-shaped voltage higher than output voltage may be applied to the driver transistor. Therefore, care should be paid regarding its absolute maximum ratings ( $V_{DS}$ ,  $V_{CF}$ ). We recommend to use a transistor having absolute maximum ratings of at least twice the set output voltage.
- We also recommend the use of an output capacitor with an allowable voltage which is at least 1.5 times the set output voltage. This is because there may be the case where a spike-shaped voltage higher than the set output voltage is generated.  
Use capacitor with good high frequency characteristics such as tantalum capacitor.
- Choose such an inductor that a sufficiently small D.C. resistance and large allowable current, and hardly reaches magnetic saturation.
- Use a diode of a Schottky type with high switching speed, and also take care of the rated current.
- Set external components as close as possible to the IC and minimize the current between the components and the IC. In particular, make minimum connection with the output capacitor.
- Make sufficient grounding. A large current flows through GND pin by switching. When the impedance of the GND connection is high, the potential within the IC is varied by the switching current. This may result in unstable operation of the IC.
